

I do not think the new LPFM stations, are a good idea. Especially if they are going to take priority over the existing FM translators.

I listen to KLOVE on 88.9 out of OKC. It comes in nice and clear. Recently 89.1 in Shawnee, came on the air. Which is right next door to KLOVE. I would like to listen to both, but some times depending on where you are located, you can not receive one or the other.

Another problem is KOKF 90.9, has been on the air for almost 20 years. I used to listen to 90.9, KOKF, all the way to Ardmore, OK. Now, thanks to the radio station in Pauls Valley, 91.1FM, KOKF can not be heard, up to Pauls Valley. This station is too close to 90.9, and it bleeds over. The FCC needs to pay close attention, when they allow another station to be right next to each other. If these LPFM (Low Power FM) are going to be right next to each, by only one click, I am total against them. The regular FM stations are going to interference from the LPFM, and vice versa.
